Review by.Q: How to handle arguments in a flex application? I am making a flex app, What i am trying to do is, in some screen if i press a button, the other one should be able to open a new page using public function, How to pass arguments to the application, in i have seen a similar example like this, I need help, where to place that code. A: You can use either Event.MOUSE_OVER or Event.MOUSE_OVER_DISABLED to detect when a button is clicked and then handle the event of that type yourself. You can do things like open a PopUp or navigate to a new page by handling the click event of the button's parent. off the mind, in many ways, and allows us to see a disconnect between the two phenomena in more thoughtful fashion. In a way, it’s a bit like very high-quality wine, more so than regular wine; it has a similar effect to viewing the world in slower, steadier and more contemplative mode. When I’m on the weekends, I tend to do my best writing in the mornings, but my best writing tends to be while I’m up with everyone else in the late evening. The phenomenon is perfectly real, though, and I’m not trying to make it sound like it’s a ploy to get lazy. It’s just the way it is, and the experiment reminds me of that. So what can you expect in what I’ll call Between the Lines? As always, I’ll continue to add new material at least twice a week (Tuesday and Friday) and maybe as often as every day if inspiration hits. I’ll also do my best to respond to the people that make the comments on a particular piece. I won’t turn off comments as I usually do on the Internet, but I will try to respond to any comments as quickly and politely as I can so that f678ea9f9e
